Product Information

Introduction

CGC S-200 particles are unique spherical, hollow glass-like particles. These particles may be used as fillers in a variety of applications such as polymeric composites, cementitious materials, and concrete systems, to impart such properties as weight reduction, improved product performance, and lower cost.

Material Description and Typical Physical Properties

Property	Description
Shape	Spherical
Color, Unaided Eye	Gray
Average Bulk Density (g/cc)	0.42-0.45 (g/cc)
Particle Size (microns):	
90th Percentile	295
50th Percentile	200
10th Percentile	110
Softening Point	1050°C (1922°F)

Product Safety and Handling

Please refer to the Material Safety Datasheet and product label before using this product. Material Safety Data Sheets are available for this product from CGC Products LLC at 909 349 3501.

Important Notice to Purchaser: The information in this publication is based on the analysis of many samples and thus we believe the results are dependable. However, due to manufacturing variances, your results may vary.
